

November, 2011

Analyx is a professional data analytics & consulting firm with offices in Poznan, Berlin and Boston. We serve Fortune 500 clients all over Europe and the US. Being a professional services firm, our most important asset are creative, motivated people just like the

Business Intelligence Developer

we are currently looking for on a **freelance or full-time basis** for our **Poznan office**.

You will work with a professional team on development and maintenance of a data warehouse. This involves implementing new features and processes within a database, including quality control mechanisms, as well as creating software tools for internal project usage. You should be both a technically oriented person that has extensive experience using Microsoft SQL Server but also a business-oriented person that is keen on developing the understanding of their business context.

Formal requirements are:

- Completed master's degree (preferably Management Information Systems or similar) with above average performance
- Proven practical MS SQL 2005/2008 experience in design, development and maintenance of large databases
- Advanced SQL skills to query and process large amounts of data
- Relevant experience with MS SQL BI components, especially SSIS
- Experience in programming data driven C# applications
- Excellent analytical and thinking capabilities with understanding data relationships
- Fluent in spoken and written English

You should be motivated by our entrepreneurial working spirit as it gives you the opportunity to shape a young company. Besides diverse work content in prestigious projects, *Analyx* offers stable employment, above average salaries, constant improvement of professional qualifications and nice atmosphere in an ambitious and highly talented team who works for major clients from all over the world.

We would be happy to discuss business model and the position personally. Please send your application in English to jobs@analyx.com
